Letter of Recommendation

To whom it may concern:

During her studies at the Technische Universität Dresden, Ms. Uliana Andriieshyna, born October 3, 1987 in Kherson, Ukraine, was working as a student assistant ("Studentische Hilfskraft") for the research project SPEKTRUM at our Chair of Computer Networks under my supervision. She manually created a comprehensive data set in the period of August—October 2012, which was used for evaluating news event clustering algorithms. Because of our positive experiences and our good cooperation, she was working on a second task in the month of April 2013, where she annotated a set of text documents with Named Entity information. Both data sets were used as gold standards for evaluation purposes in the SPEKTRUM project.

Ms. Andriieshyna is highly motivated, well organized and hard working. She was able to understand her tasks quickly, fulfilled both of them considerably faster than expected and created high quality results, which are very valuable within the project.

We thank Ms. Andriieshyna for her efforts and wish her all the best for her future working life. If you should have any further questions concerning this recommendation, feel free to contact me.

Sincerely,

Dipl.-Medien-Inf. Philipp Katz
